

01. FOR ANY TRAFFIC APPLICATION Collaborative traffic intelligence

Automatically detect objects, categorize them into 8 classes and analyze their motion in detail. Take a deeper look into the speed and passage time, recognize colors or read license plates on a large scale. Convert your camera network into a collaborative environment to tackle various traffic incidents, parking problems, or traffic jams. The possibilities are endless.

02. POWERED BY FLOW

Wire the traffic

Define your traffic brain interactively with a unique visual traffic language: FLOW. Just drag and drop the right traffic operators or analytical modules and wire them to extract the traffic knowledge you need. In the same way, turn the extracted knowledge to traffic actions or share it without any delay. Have a complete overview of the situation while being able to drill-down to the slightest detail effortlessly.

03. INTERACTIVE DATA VISUALIZATION

Understand the movements

Get all the insight to the traffic movements with fully customized dashboards. Combine various interactive, intuitive, and easy to use widgets for visualizing and analyzing traffic data in many forms including charts, graphics, images, numbers and tables. Auto-generate complex statistics and traffic reports in a few clicks for actionable decision-making.
